

Education and Training Services

Update your skillbase and ensure operational excellence across the enterprise with specified training.

Bioproduction Group offers training and education services as part of our comprehensive offering to biopharmaceutical manufacturers. We are world experts in biopharmaceutical operations research, with close links to a number of leading universities, institutes, and research organizations.

Bio-G's Training and Education services will bring your biopharmaceutical operations team to the forefront of manufacturing operations and supply chain excellence. We offer a range of educational services covering the Bio-G toolsets and biopharmaceutical manufacturing operations. Our thought leadership and expertise as educators is based on our strong university roots and our experience in implementing highly successful models at some of the largest biomanufacturers in the world.

OPERATIONAL EXCELLENCE TRAINING
Biotech-specific case studies
Learning from other industries

EXECUTIVE SEMINARS
High level challenges
Best-in-class strategies in biotech operations

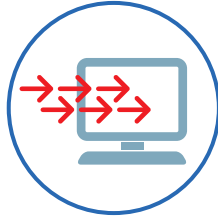

EDUCATION AND TRAINING SERVICES

Bio-G's training includes three key focus areas. Training on our software products for both beginner and experienced users allows multiple groups across operations to learn the toolsets and understand variability and data. Operational Excellence training delivers best-in-class operational methodologies to your organization, based on our experience in biopharmaceuticals and across other high-tech industries. This allows manufacturing to tightly focus on the core operational issues facing the business and learn methodologies to address those issues. Finally, our executive seminars offer training to directors and VPs as they seek to understand the best way of managing the complexity in biopharmaceutical operations.

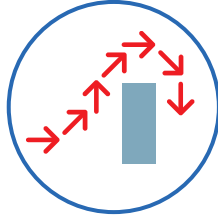

“Bioproduction Group knows biotech operations better than anyone else in the industry.”

“Bio-G’s training helped us refocus on the critical issues facing our manufacturing facilities.”

SOFTWARE TRAINING

Bio-G’s software is applicable to a number of groups across the biopharmaceutical network, from process development and tech transfer to engineering and manufacturing sciences. Our software training services provide tailored training to each of these groups, focusing on case studies and examples that are specific to each one.

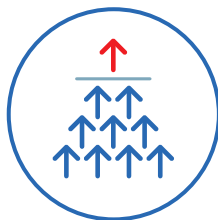

OPERATIONAL EXCELLENCE TRAINING

One of the core tenets of Operational Excellence is the creation of a learning organization steeped in methodologies that include lean manufacturing, six sigma, and just-in-time production. Bio-G training is based on hands-on examples and case studies, and will ultimately bring clients to a place of operational excellence.

Bio-G’s Operational Excellence training teaches the universal principals of operational excellence, i.e. the aspects of the discipline that can be applied from other industries, PLUS those aspects of operational excellence that are unique to biomanufacturing. Our operational excellence courses have been taught at some of the world’s largest biomanufacturers.

“Operational Excellence training is usually too general and unfocused, with the trainer having no knowledge of biomanufacturing. Bio-G delivered training with real examples from biotech, addressing problems I struggle with every day... an amazingly useful course.”

EXECUTIVE SEMINARS

Bioproduction Group also offers executive seminars and education courses for those new to biotech, but familiar with operations disciplines in other manufacturing areas (such as the semiconductor or automotive industries). Our executive training courses provide a comprehensive understanding of the key challenges facing biotech today, and the toolsets and learning that can be applied from other industries.

BENEFITS

Our intimate understanding of biotechnology manufacturing processes, combined with our robust products and services have resulted in millions of dollars in annual savings for our clients. Our training and education services allow your organization to generate a lasting platform for understanding operations, and driving positive change from within the organization.
